

## Check Out These New Product Releases!

### AA 200-3 Series Slot Stand

A&A Enterprises announces the placement of the New AA 200-3 Series of Slot Stand. The AA 200-3 Series provides the industry with flexibility and alternatives in design layouts for the gaming floor. The company's

advancement will be marked by the placement of the AA 200-3 series in the newly renovated High Limit Slot Room at Oneida Casino, located in Green Bay, WI.

The AA 200-3 Series of Slot Stand is a revolutionary product. Independently replaceable front panels (RFP) allows for casino operations to only replace or repair the damaged areas, thus reducing long term associated costs. The ease of maintenance on the AA 200-3 series can be done in a matter of minutes. With a no tools required approach, there is no need to remove any single or multiple machines. Thinking outside the box caters to the arch design of the AA 200-3 series slot stand that can be highlighted in multiple ways. Keeping in mind the associated up front purchase costs, the AA 200 series slot stand reduces the expenses on keyed lock entries as well as hinges. There are none! No need to replace these because they are non-existent.

### ALPHA Elite™ Jumbo Cabinet

Standing nearly eight feet tall and three feet wide, Bally Technologies' gigantic Alpha Elite™

Jumbo cabinets are sure to make a bold statement on casino floors from coast to coast. Available in video or stepper configurations, these massive games actually look and play exactly like their standard-sized Alpha Elite V20, V20/20 and S9E counterparts. This means that they can take advantage of Bally's complete library of video and stepper titles. The cabinets also share common components with Bally's existing ALPHA Elite product line – such as

horizontally mounted 32-inch video monitors, standard iView™ Smart Screens, button decks and universal reel glass.

In a stepper configuration, the Jumbo cabinets offer three, four or five reels of oversized gaming action. An eye-catching backlit LED active-light bezel around the reels adds an extra dimension of visual impact to this stunning gaming device. Additionally, such common features as the slot-card reader, cashless ticket dispenser, bill acceptor and iView display are all positioned just above the standard-sized button deck within easy reach. The ergonomically designed button deck is also tilted slightly forward for ease of use.

Jumbo action. Jumbo thrills. Jumbo fun. That's what makes Bally's colossal new Jumbo video and stepper cabinets really big news.

### PAR30-Style LED Spotlight Bulb

LEDtronics announces the latest addition to its series of high-power, PAR30-style LED spotlight bulbs. The white-body, medium-beam PAR30 LED bulb is made up of five 3-watt LEDs and replaces filament-based PAR30 bulbs, combining advanced Light Emitting Diode (LED) technologies, standard 26mm Edison screw-in base and light optimizing design, producing 337 lumens of vivid warm-white light.

With up to 85% energy savings, high shock/vibration resistance and long-lived, high-power white LEDs – lasting up to 50,000 continuous hours – you can see the savings quickly add up. Since it uses LEDs instead of standard filaments, this energy-efficient bulb never gets hot and is safer and more economical than halogen bulbs, making it ideal for floodlights and other household and commercial light fixtures.

Designed for customers requiring the highest levels of brightness and efficacy, the new white-body PAR30A bulb has a wide range of applications: Recess or track lighting, accent lighting, general area lighting, architectural and landscape lighting, display-case fixtures and cabinet lighting, signage spotlighting and backlighting, industrial OEM equipment lighting, and truck-bay dock lighting, to name only a few. ♣
