Custom Blackjack Tables

Rye Park Gaming has recently developed a line of high-end stainless steel gaming tables, which provide the ultimate in durability and professionalism, and incorporate many innovative concepts. Stainless steel is used for the base and foot rails so the parts of the table that get the most abuse will withstand the 24/7 wear and tear for years to come. High Limit tables offer an option of stainless steel kick plates to protect the laminate panels.

RPG's new line of blackjack tables incorporates "Easy Change Table Tops" featuring segmented player areas. Individual player or dealer sections can be interchanged in less than 60 seconds. This modular approach allows for easy replacement of sections as needed, saving time and money.

Another feature that sets these tables apart from the crowd is the custom designed table game layout. Rye Park creates stunning one-of-a-kind layouts that appeal to customers and meet surveillance requirements. Using the latest technology, RPG's deep ink penetration creates long lasting vibrant colors and images, and reduces usage wear in the dealer area, increasing the lifespan of each layout.

5-Ton Portable Air Conditioner

A re-designed portable air conditioner that delivers five tons (60,000 BTU/hr) of cooling capacity in a space-saving footprint is offered by Atlas Sales & Rentals, Inc. Manufactured by KwiKool Portable Cooling Systems, the SAC (Strategic Air Center) Model 6021 portable unit features a sleek high-tech design in a very compact package now measuring just 24" wide x 52" long x 57.5" high. It is the first unit of its size to offer a hyper twin direct drive (HTD), resulting in easier and lower-cost service compared to portable coolers that use belt-drive systems. The HTD drive uses less space than belt drives, resulting in the smaller footprint while simplifying maintenance.

The Atlas/KwiKool 5-ton unit takes up less space than

many competitive models for more flexible and economical performance. It also uses a dual duct system for balanced air pressure – a more efficient design than single duct systems, which can lose 15% of their efficiency due to negative pressure. A high-pressure condensate pump is included with the unit, and a user-friendly control panel conveniently located on the front of the unit provides several cooling options.

New Game Cabinets for Washington Market

Bally Technologies, Inc. announces that it is expanding its game cabinet product offering for the Washington market to include the company's most cutting-edge new Pro Series™ cabinets, as well as the ALPHA Elite® V32, and Reel Image™, the industry's only video cabinet that plays just like a spinning-reel game.

Reel Image features breakthrough innovation by incorporating powerful imaging technology that makes a video slot look and perform just like a spinning-reel game. Reel Image encompasses key stepper-like features, including the mechanical 'click' when spinning, and the signature 'bounce' when the reels come to a stop. Reel Image has been approved by Gaming Laboratories International (GLI), and is currently in testing with the Washington State Gambling Commission (WSGC).

The Pro Series V22/22 Upright and V22/26 Slant cabinets set new benchmarks of unrivaled player comfort, interaction, and control. Custom HD surround-sound, lighting and Super Candle synchronized to game play, and easy serviceability through the use of vertically opening doors are hallmarks of this striking new platform. The Pro Series cabinets have been approved by the WSGC.

Bally also recently introduced the ALPHA Elite V32 video-gaming cabinet, which features a can't-miss 32-inch high-resolution vertical touch-screen monitor and eye-catching LED lights on each side of the monitor to attract attention and add visual punch. Bally's V32 cabinet has been approved by the WSGC. ♣
