TECHNOLOGIES®

# Excitement at your fingertips.

The player touches the 32-inch touch-sensitive screen and physically spins the bonus wheel for an intensely interactive new gaming experience. Nothing captures the excitement of the bonus wheel like spinning it yourself, and Cash Spin is the revolutionary new game that lets you do exactly that.

Bally's U-Spin™ gesture-control technology senses both the pressure and speed of a player's hand gestures as they spin the virtual wheel, providing a new level of player interaction never before available in a slot machine.

Cash Spin features Bally's Interactive Reels technology using high-def LCD screens superimposed over the mechanical reels. In the bonus round, dazzling animations magically "float" in front of the reels for a captivating and interactive gaming experience.

## Innovation you can touch.

State-of-the-art touch-screen technology and realistic physics allows Cash Spin to respond to the slightest movements – putting the thrill of spinning a real wheel at your players' fingertips. Call your Bally account executive today.
