### FlashPoint™ Bingo Display

Want to up your Bingo game, but can't afford, nor need the deluxe equipment typically found in those larger halls? Video King has a simple solution for all those smaller-scale venues, senior centers, and fraternal organizations, which in comparison, costs virtually nothing at all. The new Flashpoint™ Bingo Display! Combining gaming ingenuity with our computer know-how, Video King has developed software, which can display a 75-number Bingo board onto a touch-screen PC.

The computer also has a HDMI and VGA output, which means the same Bingo board image can be displayed onto one or more large-screen TVs. It makes no difference whether you use Bingo cards, a roll cage or random number generator to "call" the balls. Once a number is called, simply touch the number displayed on the computer-generated Bingo board. As soon as the number is touched or "daubed," it will zoom large - for a programmable number of seconds - onto the computer, as well as any TV, before returning back to the full-screen (16:9 widescreen) Bingo board in your hall.

For added pizzazz, an animated Bingo graphic will be activated, again for a programmable number of seconds, by pressing the "Bingo Button" once Bingo is called.

The software can be sold separately or as a package, which would include the software, TV screens, computer and cables.

### PlayOn

ACS is set to revolutionize the gaming space and minimize unnecessary gaps in play through a seamless and intuitive solution. PlayOn technology conveniently allows patrons to access their own money utilizing their own debit card, without ever having to leave a table or slot machine. At the gaming position, a patron will swipe their debit card at the PlayOn terminal, request an amount, enter their corresponding PIN, and upon approval a voucher is

produced and converted to chips at the table or re-inserted at the slot machine. It's as simple as that.

For casino/operators, the hardware may be installed in a matter of minutes; the system adheres to all PCI/DSS standards and its proprietary system provides for internal controls, uniform auditing reports, reconciliation and verification. Also at the core of PlayOn's unified experience is its strategic processing partnership with Vantiv Entertainment Solutions (VES). Processing more than 23 billion transactions annually with a volume of \$842 billion-plus, VES is the payments and transactional engine behind the product.

ACS' patented PlayOn technology has been granted GLI approval and complies with regulations for table games in California, Connecticut, New Jersey and New Mexico.

### Ultimate Global Solution

The Ultimate Global Solution automates loyalty enrollment and jackpot win entry by populating the information from any ID directly into the CMS. While IDScan.net has deployed this sort of automated technology in casinos for over a decade, this solution is the first to allow casino operators to populate information from any country ID.

This is invaluable for the industry for a number of reasons. Casino personnel no longer have to waste time manually entering ID information and management can be assured that the information is 100% accurate. This is particularly important when issuing jackpot wins. In addition, the solution utilizes IDScan.net's proprietary parsing engine along with UV and Infrared Technology powered by 3M hardware to provide an unparalleled level of ID authentication.

The Ultimate Global Solution is IGT certified and will work with any Casino Management System. Casino operators can purchase it out-of-the-box or utilize it with IDScan.net's ID scanning SDK for larger scale deployments. ♣
